

STARTING A CRYPTO PROJECT?

# Get Started With Prebuilt dApps

All of our products are white label and can be completely customized to suit your project.

## Cryptocurrency Exchange Development

We are professional in developing pre-deploy remade exchanges running on multi platforms such as Web, iOS, Android. Exchanges built by VinDAX are all qualified enough to list on Coinmarketcap, Coingecko...

- SPOT TRADING
- MARGIN TRADING
- OTC
- MOBILE APPS

## Blockchain Development

- ETHEREUM
- HYPERLEDGER
- OPENETHEREUM

We design and develop custom blockchain solutions using Hyperledger, EVM, Solidity, Cosmos or Substrate. Building business logic to running blockchain nodes, we understand how to develop a decentralized platform for NFTs, bridges, DEX, metaverse, tokens and dApps.

## About us

It didn't take us long before we realized that blockchain is undoubtedly the next step forward for the world after the internet. We founded VinDAX as an initiative to help global adoption of blockchain, create innovative products that regular people can use, and help businesses truly leverage the power of decentralization. Today, we are leading player in the industry with a worldwide clientele.

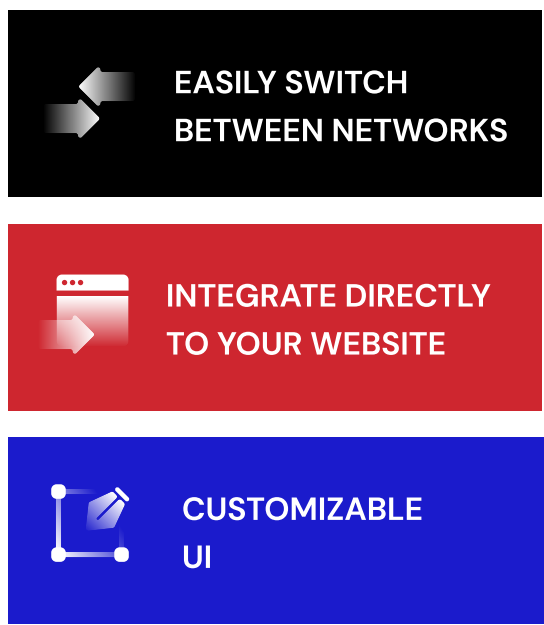

## Blockchain Wallet Development

Our blockchain app development services include an airtight wallet solution for storing and transacting your cryptocurrencies.

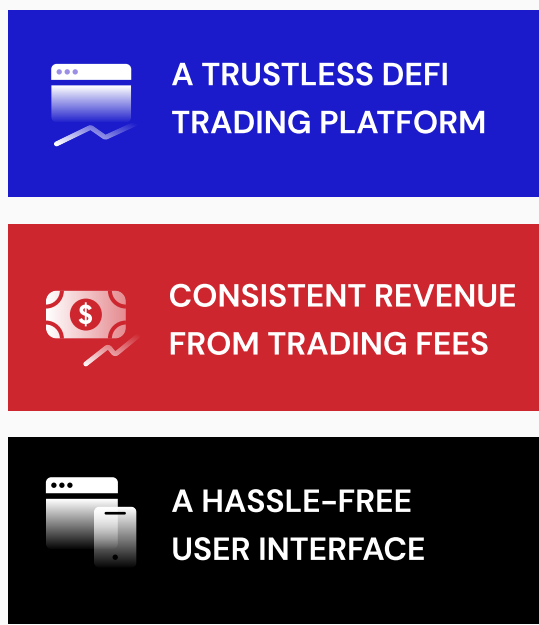

## Token Bridge Platform

Building cross-chain crypto tokens used to be extremely hard and only left to the bigger players in the business. But your business is not built for yesterday, it's built for tomorrow. Now, you too can easily make your token cross-chain with our Token Bridge Platform. Your users can send tokens between networks easily and efficiently by connecting their web3 wallets.

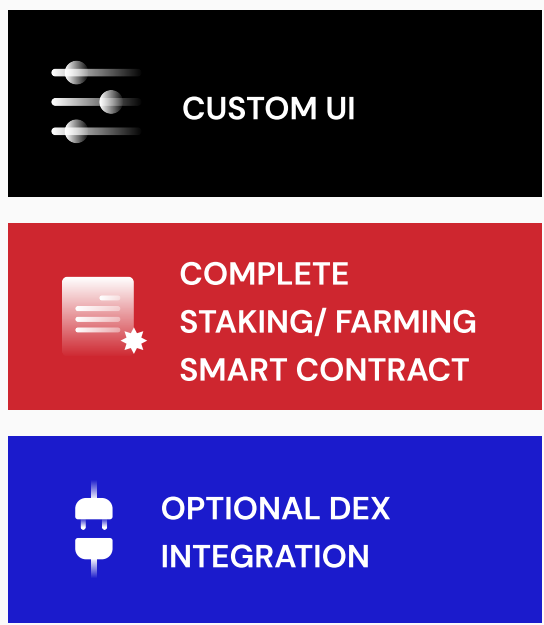

## Decentralized Exchange

Trading platform continue to be the largest grossing businesses in crypto. But you need an entire team to manage a full-scale centralized exchange. However, you can still make comprehensive revenue and run a global trading platform in a matter of days.

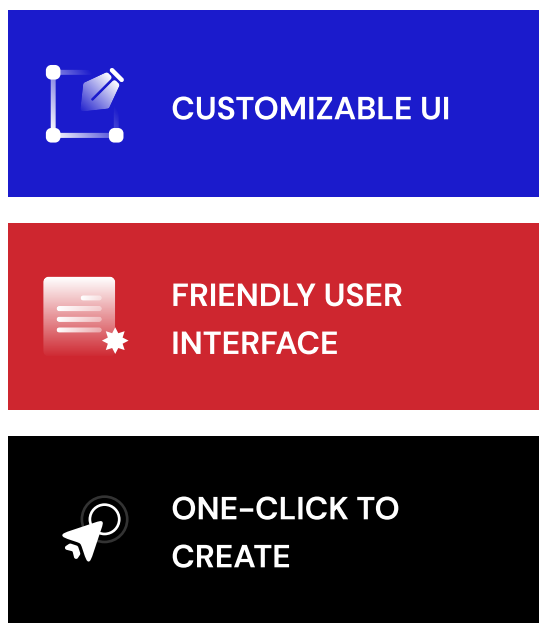

## Staking Platform

It's not just you, almost everyone is disappointed in central banks. There's too much red tape, not everyone can access it, and you're not going to get much in return if you only have a few hundred to spare. Our staking platform is a prebuilt smart contract with a customizable UI where your users can easily deposit their crypto and earn passive income.

## Token Factory

With a Single Click, Deploy Tokens. New business models are made possible by blockchain tokens. Working with them across various protocols is simple by using VinDAX's token factory.

## NFT Marketplace

Many people think that NFTs are just for digital artists, but there is a whole lot more value to the space. NFTs leverage the power of blockchain to create an ecosystem where assets such as Art, Music, Movies, Real Estate, Collectibles, and even identity can be efficiently tracked and the ownership recorded on the blockchain. Through an NTF Marketplace, you can allow your users to sell, buy, and monetize content without paying commissions to intermediaries.

All of our products are white-label and can be completely customized to suit your project.

## Crypto Escrow

This system will work like Upwork escrow. Every escrow has an expiration time. The buyer will create an escrow which will be shown in the buyer and seller dashboard as pending. The buyer can release payment anytime. If any dispute occurs then the buyer will request to admin to refund that escrow. Admin will investigate the issue and refund if needed before the expiration time. The seller can also refund. After the expiration time, if no dispute or release payment happens, the seller can claim the escrow funds by himself.

- 100% DECENTRALIZED
- ADMIN FEE SUPPORT AND PROFITABLE FOR OWNER.
- WEB3 SUPPORTED SIGN-IN SYSTEM
- REFUND, EXPIRATION TIME SUPPORT
